

Disinfection and Sanitation Service

\$250 Wichita area

Your best defense

The source of most disease and illnesses are microscopic organisms like bacteria, viruses, fungi and mold. One of the best ways to avoid getting sick is to periodically disinfect public areas like your home, office, school or vehicle.

First we use an industrial fogger to spread biocide into every crack and crevice. This is a safe and effective product used by hospitals to disinfect emergency rooms. Then we wipe down walls, tables, counter tops, light switches, door knobs and other surfaces commonly touched by sick people.

It only takes about an hour to professionally disinfect most homes. Protects you from MRSA, HIV, H1N1, E. Coli and other dangerous germs. Perfect for locker rooms, nursing homes, day cares, restaurants, break rooms and other high traffic areas.
